

## README

I have created bash file ' simulator.sh' which takes the file arguments as arguments.

Step :1 run command ant in the command prompt

```
$home: ant
```

Step 2: run bash file 'simulator.sh'

```
$home: bash simulator.sh Inst.txt Data.txt Config.txt result.txt
```

Now the output is printed on the console and the result is also written to the result file.

NOTE:

Run the step 1 because I faced error while testing in GL server running the bash file directly.
